

Oct 16, 2024 | 📅 David Meeting

Attendees:

Notes

- Walkthrough and handover!!
- Is pleased that the github is public, David wants collaborator permissions
- Brief overview on how to use the github/project
- In presenting in IFB399 - Highlight we wrote the doc in google docs
- Meeting minutes should be personalized to us as they are most important to us
 - Better to be used like whiteboards - have meaning to us that's opaque than to others
- Occasionally phrases/terms that convey a lot of info in paragraph- can help to bolden text
 - Use bold in places such as dot points
- Watch biased wording, i.e. optimal, efficient etc. Be more clear as to what is optimal
 - We implemented - how? Pulled from code? Made from scratch
 - David cares a lot about the how and why to our points
- Have a timeline potentially outlining progress
- David appreciates the work as there's no waffling it's just direct information
- Have to remember, this is an overtly exploratory project. Gained many insights and took a broad nebulous direction and resolved a reasonable number of uncertainties
 - David is very pleased with our work
- Chuck a README file into each folder
- Show off a lot of the evidence we have in Git in 398 as it proves useful
- Likes that the Git is informative
- A way to quickly show things like number of entities that the visualization method can cope with - summarizes strengths and limitations of research I considered
- Our methodology is close to agile - meetings are basically are a scrum
- Mention project debrief in 399 report about the start of the year
 - To show us process in action sooner
